

Scenario 2: An AE is participating in the programme

AE's must continually maintain eligibility across all components of accreditation.

When injuries occur AEs and TPAs will manage claims within the cover year and an agreed claims management period.

Annual valuation of claims for visibility of total liability will take place, and full and final handback of claims at the end of the claims management period will mean no ongoing liability for AEs, or confusion for injured workers.

Current state:

The annual audit is a single point in time check for eligibility of AEs.

For injuries, only open claims are handed back to ACC at the end of the claims management period, which are assessed for lifetime cost and invoiced. Claims not open at that time that reactivate and any 'incurred but not reported' claims are invoiced to AEs quarterly.

Future state:

Effort to ensure accreditation is spread through the year and assessment of AEs and TPAs is focused more specifically on claims management.

Annual valuation of claims will take place. After a 4 year claims management period full and final handback of all claims at the end of the claims management period will occur.

Full and final handback Maintaining accreditation Managing claims

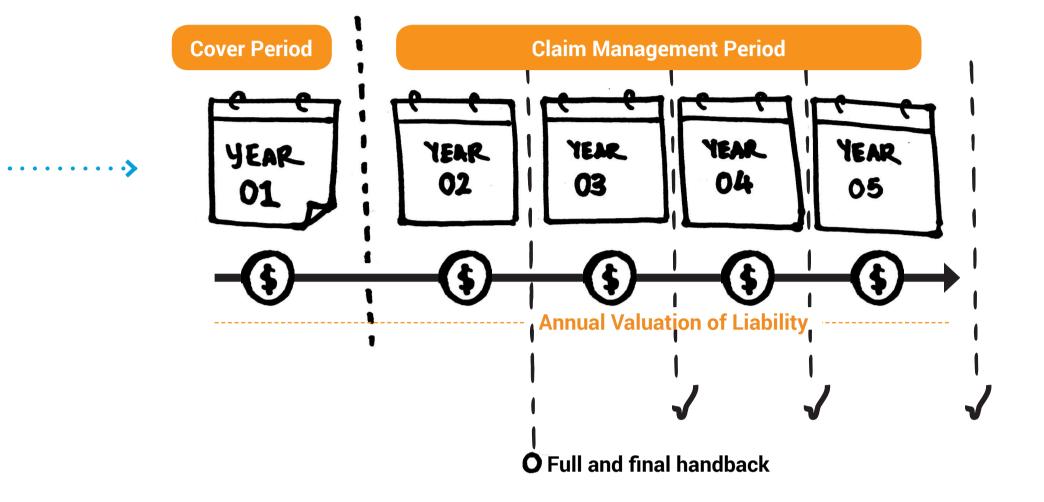

Members are expected to keep all components of accreditation current at all times in order to maintain eligibility

Describe to us what you think 'good' looks like for each component of accreditation.

AEs and TPAs will manage claims for the cover year, and an agreed claims management period. Annual valuation will take place, so that members are aware of their liability at any point.

All claims will be valuated, and an agreement made between ACC and the AE full and final handback will take place. At the end of the claims management period AEs will take no further part in the management of a claim once it is handed back.

Claims transferred to ACC

AE is invoiced an agreed amount for cost of all claims

Components of accreditation

Certification

ACC certifies an AE or TPA to manage injury, claims and rehabilitation of injured workers.

- Certification of systems at entry and ongoing periodically. Monitoring performance and quality aspects on an ongoing basis.
- Consistent expectations across work and non-work injury and claims management (where relevant).

\$ Financial strength

Confirming AE is financially capable and can meet entitlement claims

- AE has adequate finances and can look
 A business must demonstrate the after a worker if they get injured.
- No change to current state expected.

Health & safety systems

Confidence an AE has appropriate H&S systems in place.

- quality of their H&S systems.
- Assessed by external body rather than

Worker voice

To gain an understanding of the level of engagement, trust and support the

- Must demonstrate appropriate systems to understand worker experience (breadth
- Utilise existing Research New Zealand satisfaction survey for injured workers. ACC interviews a cross-section of workers.

Improvement framework

Injury prevention and organisational

improvement through documented

- capability.
- Injury, claim and rehabilitation management.
- Worker participation.

	Claims management certification Claims management quality check Organisational injury management systems						
	AE or TPA (dependent on who manage claims). All AEs pass basic knowledge test.	AE or TPA (dependent on who manages claims)	All AEs	All AEs	All AEs	All AEs	All AEs
What is the element assessing?	Having systems, processes, and capability to manage claims	Quality of claims management	Processes, policies, resource, and sound approach to managing injury	Ability to pay claims/ entitlements	Ensuring health and safety systems meet a recognised standard	Ensuring all other components function well from the worker perspective	Ensuring AE is continually identifying areas for improvement and taking steps to make improvements
How is the element assessed?	Standard set by ACC. Option for ACC to outsource assessment. Test for basic knowledge of AE.	In the background via performance monitoring function. Potentially via direct access to AE/TPA systems	Standard set by ACC. Assessment outsourced to third party.	Through a test	AE achieves external standard, e.g. ISO 45001. Full SafePlus assessment.	Information/submissions go direct to ACC	Assesses existing strategic documentation for alignment with improvement framework
When is the element assessed?	At entry. No less than every 3 years (if earned). Combined with injury management systems if AE is self-managing.	Annually at minimum (after the first 12 months or earlier if necessary)	At entry. No less than every 3 years (if earned). Combined with claims management certification if AE is self-managing	Annually	Depends on length of the standard held	At entry. Ongoing basis (frequency to be determined).	At entry. Checked annually or on an ongoing basis (responsive to performance).
Who is the element assessed by?	ACC/Third party (reserving the option to outsource)	ACC	Third party	ACC	Standards organisation	ACC	ACC
Performance rewards and consequences	AE – Exit programme if failing to meet expectations, or required to contract a certified TPA. TPA – loses right to manage claims on behalf of AE clients.	Potential to exit programme if failing to meet expectations. See scenario 3 for high/poor performance	Potential to exit programme if failing to meet expectations. See scenario 3 for high/poor performance	Exit programme if unable to pass financial test	AE risks being exited from programme if external standard is not met or held	High/low performance feeds into improvement framework and conversations between ACC and AE	All components (except financial strength) feed into the improvement framework
